

OVERVIEW

DOMINECK TRUCKING INCORPORATED

Domineck Trucking Incorporated (DTI) was established February of 2001 in Atlanta with long-term goals of providing a complement of site improvement services to our clientele. DTI is a company certified as an African American Business Enterprise (AABE) and holds SBA 8(a) and DOT certifications as well. Not only is our company committed to providing exceptional service with a high level of professionalism, efficiency and integrity, we can also assist companies in reaching their minority participation obligations. We are based in Lithonia, Ga. And our market is the southeast with an emphasis on Atlanta, Ga. and its suburbs. DTI has been fortunate to primarily remain at home focusing on a wide array of residential, commercial and municipal projects. However, we have handled projects throughout the southeast most recently in North Carolina, Florida and consulting in Coastal South Carolina.

DTI has clients that range from small, first time residential developers to \$200 million General Contracting Firms and International Development Organizations. We have the knowledge and expertise to handle complex and technical system installations and the care and concern to help guide and assist developers new to the industry.

While providing a wide array of services, DTI tries to focus on "turn key" site developments handling the clearing/grading, storm sewer, sanity sewer (including pump station construction) and water/fire main systems complete. We also look for grading and pipe system installations relative to all types of commercial and municipal projects. DTI also provides consulting and management services for developers and other project owners for site developments listed within.

DTI currently has 40+ pieces of equipment in its fleet and customarily handles all construction directly. Since inception, DTI sub-contracted less than 6% of its contracted workload. Generally, DTI will use sub-contractors only for incidental service and support (i.e.-single lot padding's water/sewer line testing etc.)

Domineck Trucking Inc. provides site improvement services to our diverse clientele. Our management and personnel are focused on delivering successful projects to our customers ranging from residential/commercial developers to municipalities. We pride ourselves on developing and nurturing all aspects of our client services from project efficiency and communication to establishing solid long-term relationships. We look forward to growing with each of our clients and value their goals as much as our own.

CIVIL SERVICES

Commercial Construction

Domineck Trucking Inc. (DTI) has completed numerous projects for a wide variety of clients ranging from new school construction to warehouse additions. DTI has the ability to act as the general contractor coordinating all phases of the project or perform as a subcontractor with the general subcontractor. Our scope of services is as follows:

- Clearing
- Grading
- Storm Water
- Sanitary Sewer
- Water Main (Fire & Domestic)

Municipal Construction

Domineck Trucking Inc. (DTI) has completed several projects for general contractors ranging from new water treatment plant construction to waste water treatment plant upgrades. DTI has installed gravity piping to depths of 50-feet and backfilled water inlet structure to 60-feet in depth. Our scope of services is as follows:

- Hauling
- Excavation
- Backfilling and Compaction
- Gravity Piping Installation
- Restrained Joint Piping Installation

LANDFILL SERVICES

New Landfill Construction

Domineck Trucking Inc. (DTI) has completed numerous landfill construction projects for general contractors ranging from leachate recovery piping to complete leachate storage facilities. DTI specializes in fusion of HDPE piping and has the expertise to handle the most difficult leachate collection project. DTI offers complete turnkey services for pipe fusion, excavation and installation of the entire leachate recovery system. Our scope of services is as follows:

- Leachate Collection Piping
- Leachate Pump Station
- Leachate Forcemain Piping

Existing Landfill Improvements

Domineck Trucking Inc. (DTI) has completed several landfill improvement projects for general contractors and landfill owners ranging from leachate manhole replacement to methane recovery well extensions. Our scope of services is as follows:

- Manhole Replacement
- Piping Repair / Replacement
- Pump Station Renovations
- System Trouble Shooting

LANDFILL SERVICES

continued

Landfill Closures

Domineck Trucking Inc. (DTI) has completed several methane gas recovery projects for general contractors and engineering firms ranging from methane gas recovery piping to methane gas destruction systems. Our scope of services is as follows:

- Methane Gas Recovery Piping
- Methane Destruction Systems
- Condensate Collection and Transfer Systems
- Methane Recovery Wells

SPECIALTY CONSTRUCTION

Domineck Trucking Inc. (DTI) has completed numerous specialty projects for general contractors and engineering firms ranging from contaminated site remediation system installation to light duty bridge installation. Our scope of service is as follows:

- Soil Vapor Extraction System Installation
- Groundwater Remediation System Installation
- Retaining Wall Installation
- Light Duty Bridge Construction

DTI PROJECT SAMPLES

THE FOLLOWING IS A SAMPLE OF PROJECTS DEMONSTRATING DTI'S CAPABILITIES:

Augusta Utility Dept., (N. Max Hicks Water Treatment Plant), Tobacco Road Water Treatment Facility/Augusta Ga. Summer 2004

DTI demonstrated our specialization in technical skills in the installation of several different types of pipelines for this project. DTI installed 5,000 lf of 24" DIP, 1,000 lf of 2" Copper Service line, 1,000 lf of 60" Steel Gravity Flow pipeline and 1,500 lf of 42" Restrained Joint DIP that ranged in depth from 8 to 50 feet deep. Triple stacking of trench boxes was required on much of this section and all work was conducted professionally and in accordance with OSHA and EDP regulations. Once again, DTI was recognized by the project owners for our "quality and efficiency" in the installation of these systems. Additionally, DTI was contracted to provide backfilling and compaction of 10,000 cyds of dirt at the pump station location conducted in 1 VF lifts and subject to compaction requirements of 95% of proctor. All requirements were met.

City of Valdosta Methane Extraction System/ Valdosta, Ga. / 2006

DTI was contracted directly by the City of Valdosta to install a complete Methane Extraction System for one of their closed landfills. System included the welding and installation of 1,700+ feet of 6-inch HDPE pipe and a series of 20+ feet deep extraction wells complete with screens and wellheads. This project had a 28-day construction schedule for completion. DTI completed the project in 11 days.

continued ►

Cumberland Mall Expansion / Marietta, Ga / Spring 2006

DTI was contracted to provide sanitary sewer, storm sewer and waterline renovations for Cumberland Mall expansion that included a new restaurant wing housing clients such as Maggiano's and the Cheesecake Factory as well as facilities for the new Costco. Construction services provided included demolition and by-passing for existing utility systems while re-routing and installing new utility system upgrades and keeping the current systems operational. The Storm and Sanitary Sewer pipelines ranged in depth from 8-feet at the shallowest to 32-feet, the deepest.

City of Atlanta (Quality of Life Project) / Atlanta, Ga. / 2006-2007

DTI in conjunction with Bankhead Contracting Co. successfully hauled asphalt to assist in the completion of paving roads for the City of Atlanta for the Quality of Life Project.

Akers Mill Shopping Plaza / Cobb County / 2007

Home to anchor stores such as LA Fitness, Sports Authority and Toys R Us along with scores of boutiques, this project involved parking lot demolition and demolition of current utility main lines to allow for the reconfiguration of the site to welcome two additional stand-alone building sites. This project included the excavation and installation of an underground detention system comprised of (7) seven 60" CMP lines completely buried in gravel as well as the demolition/removal of the current/storm, Sanitary and Water Systems and installation of new mains for all 3 systems. All work was provided while the tenants remained operational and ALL work was self performed by DTI.

Airport, McCollum Field / Cobb County, Kennesaw, Ga. / 2008

DTI loaded, moved, placed and fine graded over 30,000 CY of dirt between the Side A taxiway and the primary runway. By performing our operations ONLY during nighttime hours and working in concert with the safety coordinators of Cobb County Airport Authority, the airport remained fully operational throughout the duration of the project while DTI also completed the project 2 weeks ahead of schedule. The fine grading of this area required a painstaking 6:1 slope so as to have as little grade as possible for the safety of the aircraft. DTI coordinated and managed over 2500 loads of dirt through airport tarmacs, gateway entrances and restricted areas flawlessly and without incident.

Morning Creek Pump Station By-Pass System Installation / Fulton Co., Ga. / 2008

DTI installed an emergency By-Pass system at this existing pump station. Installation consisted of tying the existing 30" force main, installing approximately 150 lf of 12" DIP (Ductile Iron Pipe); installing all valves, check valves and fittings and the installation of a 12" DIP Suction system inside the existing wet well. Lines from the wet well and force main were run to a central location where a new concrete parking pad was constructed providing accessibility to a mobile pumping system. DTI self performed all operations including the concrete work.

Georgia Power / Atlanta, Ga. / 2008 – Present

DTI provides transportation / hauling of unsuitable material from McDonough to existing plant McDonough ASH stacks.
